Teaching

Courses taught

Over the last 11 years at UTEP, I have consistently taught two courses each semester, with the exception of two semesters after I was hired as an assistant professors and four semesters during which I was given a course release (teaching only one course per semester). I have also regularly taught independent studies, in addition to the above regular course load.

I have taught courses at the undergraduate level: including introductory courses (CS1, 2, & 3), theoretical (CS3350 Automata), practical (CS3360: Programming Languages), Artificial Intelligence, a few special topics in Constraint solving, Game development, as well as graduate courses: including core courses (e.g., Logical Foundations of Computer Science), a few special topics in Intelligent Computing.

My teaching evaluations have consistently been around 4, recently closer to 4.5+ with a small variation.

Teaching innovation

Always seeking innovation in the classroom to increase student success, break the barrier of usual intimidation, engage all students, I have tried several approaches over the years, from using the old hotmail messenger to answer my students' questions in real time, to being an early adopter of piazza (online system, sort of friendlier alternate to BlackBoard) to engage students through active participation and to still allow one to one mentoring.

I have also sought professional development (see below) and integrated what I learned in my classes: cooperative learning and problem-based teaching. I am now considering how to combine problem-based learning techniques with the concept of flipped classroom, where the material is expected to be delivered mostly outside of the classroom, lecturing is kept to a minimum, and "former lecture"

time is dedicated to more in depth discussions and/or engaging activities. I am planning to try some of that (not the whole course to start) in fall 2014, in CS3350 Automata.

□ **Professional Development**
