I have built a research program around the intersections between communication practice, democratic theory, and environmental policy. I bring an Earth Systems orientation to analyzing how these three dimensions enable/constrain policy options and public life. I define environmental policy broadly to include topics such as energy system change, land-use planning, and wildlife conservation. My professional goal is to conduct research that facilitates the emergence and implementation of more sustainable environmental policy, while critiquing the normativity associated with sustainability. I value classroom teaching, and serve as a faculty mentor for graduate teaching assistants. I have developed an active Theory to Practice Program that includes design and evaluation of best practices for facilitating public participation in issues related to energy and environmental policy.
